(b) (6),
 Please find attached, site maps showing the proposed sample locations for soil, surface water and sediment, ground water, and vapor/soil gas. Also attached are the fact sheets on vapor intrusion and the updated site fact sheet. In addition, I have summarized below some of the sampling activities. Should you have additional questions or concerns, please do not hesitate to call me at the number listed below or Todd Downham at 405-702-5136..

1. Soil sampling Maps: These map show the proposed locations for soil cores that will be pushed to depth. Samples will be collected at various depths and analyzed for organic and inorganic contaminants. The locations are currently centered around areas where the direct sensing investigation indicates the potential presence of waste/source material.
2. Well Sampling maps: The water wells in the area will be sampled for organics and inorganics. This sampling is in addition to sampling already conducted by ODEQ.
3. Vapor/Soil Gas sampling Maps: The refinery waste material may be a source for harmful vapors. Because of this, we will be performing a passive soil gas survey across the refinery area. These samples will provide us with data that indicates the potential for the creation of or

the presence of vapors in the subsurface. In order to determine whether harmful vapors are accumulating or entering the buildings, we are proposing sub-slab and indoor air sampling for three buildings. One of these is the building on the Wilcox Process Area. To collect the sub-slab sample a small hole will need to be drilled through the slab so that a soil gas sample can be collected from directly under the buildings. The indoor air sample consists of a small canister that is placed within the building that samples the air for a period of 8 to 24 hrs. We understand that the sub-slab sample request, due to the need for drilling holes through the slab, will need to be discussed with other members of your organization, and we will wait for confirmation prior to taking the sub-slab sample.

4. Slides presentation: This is a copy of the slide presentation from the meeting held on July 21, 2016.

Because these files are large, you will receive several emails.

Thanks you for your interest.

(b) (6), During the July 21, 2016, Open House in Bristow, you requested some site information. I have the information you requested, and I want to confirm that I have the correct email address for you. Please respond to let me know this email is correct and I will send the information.

Thank you for your interest.
